WRENFORD BOROUGH COUNCIL

Statement Guide: Measurement

Document Guide 01 | Issue 3 | Owner: Street Care Office | Review cycle: every twelve months

1. What this guide covers

This guide covers measurement: what a reporter, a caller or an inspector measured at the defect - the depth or vertical step and the width of a pothole or a trip, how deep standing water lies and how far it reaches, the clear height under vegetation, and the lean and height of a lighting column. It appears in resident descriptions and photo notes, in the inches and feet of a call note, and in the figures an earlier inspection recorded.

The guide is used by the Street Care Coordinator or Highways Inspector who opens a review - the reviewer in this guide - and by the Highways Inspector who decides it. Whether a requirement is met is a separate question, settled by the report and its defect type's own standard. This guide is about what the documents show: the tools flag only a measurement sentence whose figure differs from the report's or gives a figure the report left blank, as the Report Rules set out, and every other check here is the reviewer's own.

2. How it shows up in a statement

A sentence of this kind usually says one of these:

- a depth written as a number of millimetres deep, or of centimetres, inches or feet
- a width across the defect
- standing water measured by the kerb or across the lane
- the clear height left under the lowest branch
- a column's lean read from a phone level, or its height from the lighting inventory

3. What the reviewer checks

These are the checks the reviewer makes, in this order:

1 Find the report's own readings: the depth, the width, the water depth and reach, the clear height and the lean.

2 Read each sentence of this kind for the figure it gives and the unit it gives it in.

3 Hold a figure in millimetres or metres against the report's reading of the same answer.

4 Note a figure in centimetres, inches or feet, which the tools do not hold against the report.

5 Note a measurement that would change a requirement's result, so that the inspection settles it.

4. Requirements it bears on

Measurement bears on the depth and width requirements of the carriageway and footway standards, the water depth and water reach requirements of the drainage standard, the clear height requirement of the vegetation standard and the column lean requirement of the street lighting standard.

5. When the statement and the report disagree

When a statement gives another figure than the report's - a deeper hole, a wider defect, more standing water, a lower clear height - the reviewer notes it for the Highways Inspector and keeps the report's answer, which still decides the requirement.

6. What to ask the reporter for

Ask the reporter for the figure measured with a ruler or a tape, in millimetres or metres, and for a photograph with the ruler in it.

7. Telling it apart

A figure read at the defect is a measurement, even when it is read from the ruler in a photograph; what a picture shows, without a figure, is a photograph, which the Photograph guide covers. "The ruler in the photo shows it is 45 mm deep" is a measurement; "the photo shows a coin beside the hole" is a photograph.
