WRENFORD BOROUGH COUNCIL

Statement Guide: Weather and Water

Document Guide 08 | Issue 3 | Owner: Street Care Office | Review cycle: every twelve months

1. What this guide covers

This guide covers weather and water: rain and what it does at the defect - water collecting in the gutter or in a hole, a gully full of leaves or silt, water running off a field or a hill, ice forming in cold weather. It appears in resident descriptions, call notes and inspection notes, most of all for drainage.

The guide is used by the Street Care Coordinator or Highways Inspector who opens a review - the reviewer in this guide - and by the Highways Inspector who decides it. Whether a requirement is met is a separate question, settled by the report and its defect type's own standard. This guide is about what the documents show: the tools flag only a measurement sentence whose figure differs from the report's or gives a figure the report left blank, as the Report Rules set out, and every other check here is the reviewer's own.

2. How it shows up in a statement

A sentence of this kind usually says one of these:

- water collecting after rain, and how long it stays
- a gully full of leaves, silt or litter
- water running off a field, a bank or a hill
- a hole filling with water
- ice forming where the water collects

3. What the reviewer checks

These are the checks the reviewer makes, in this order:

1 Find the report's water depth, water location and reach, where it has them.
2 Read each sentence of this kind for where the water comes from and where it collects.
3 Check that a sentence puts the water where the report does.
4 Note water in a hole that the report does not give as linked to drainage.
5 Note a gully the works order should clear.

4. Requirements it bears on

Weather and water bears on the water depth and water reach requirements of the drainage standard.

5. When the statement and the report disagree

When a statement puts the water somewhere else than the report does, or describes deeper water, the reviewer notes it for the Highways Inspector and keeps the report's answers, which still decide the requirements.

6. What to ask the reporter for

Ask the reporter where the water stands, how deep it is and how far it reaches from the kerb.

7. Telling it apart

What the rain and the water do is weather and water; a figure for how deep the water stands is a measurement, which the Measurement guide covers, and only a measurement is held against the report. "Water pools here after rain" is weather and water; "there is 80 mm of standing water by the kerb" is a measurement.
