StreetCare AI — end-to-end user story

One street defect report, SC0052158 (sent as SC-52158 from the StreetCare app), followed from sign-in to sign-out across three roles

Built from the spec: config/config.py is not in this folder — <names> are config values

User story

As a Street Care Coordinator at Wrenford Borough Council,
I want an AI-prepared review of report SC0052158, a broken footway on Station Road,
so that a Highways Inspector appointed for the Town Centre — who did not open it —
can order the repair, send an inspector, or refer it for coordination, and a
Customer Services Adviser can tell the resident where things stand.

The report (data/input/open_defect_reports.csv, as the Report Rules read it)

Footway · no linked type · Station Road · Town Centre · Main route · outside no. 17 · photo attached
depth "2 cm" → 20 mm · width "45 cm" → 450 mm · planned "150 min" → 2.5 h · 2 documents
register: SWP0071263 Station Road, Carriageway, Live → 1 live, 0 conflicting (footway ≠ carriageway)

Acceptance criteria (what the tests / spec assert)

- ✓ references in three notations read as one: SC-52158 → SC0052158
- ✓ Footway standard §4: fixed location · photograph · depth ≥ 20 mm · width 150–1500 mm
- ✓ → Met 4 · no coordination trigger → assessment ORDER REPAIR
- ✓ POST /reviews → 201 after <LLM_CALLS_BEFORE_DECISION> = 5 calls
- ✓ an inspector outside the report's district is refused 403, before any run
- ✓ the opener may not decide (409); a refusal costs no call
- ✓ ORDER REPAIR → works order + resident update; INSPECT → inspection request; REFER → brief
- ✓ an adviser hears types, street, status — never a likelihood or crew hours
- ✓ no street figure from fewer than 5 reports

The cast (seeded in <SEED_USER_ACCOUNTS>)

- **<coordinator>** — Street Care Coordinator
- **<inspector-tc-1>** — Highways Inspector · Town Centre
- **<inspector-n-1>** — Highways Inspector · North
- **<adviser>** — Customer Services Adviser
